

LOVING TOUCH ANIMAL HOSPITAL SURGERY CONSENT FORM

CLIENT/PET INFORMATION

Client's Name: _____ Pet's Name: _____ Today's Date: _____

Procedure(s): _____

Should we need to contact you during your pet's procedure(s), please call me at:

Primary Phone number _____ Alternate phone number: _____

Pre Anesthetic Blood Work: Anesthetic drugs are processed by the liver, kidneys and other vital organs. In a healthy animal, these organs remove the anesthetic drugs from the body at a predictable rate. Problems with these organs are not always apparent. The age of the pet has no bearing on whether a pet has an issue with the liver or kidneys. If these organs are not functioning properly, there can be devastating results. Therefore, our doctors urge pet parents to authorize pre-surgical blood work. Please note pre-surgical blood work is required for pets age seven and older. Help us provide the best level of care for your pet by choosing to perform blood

PLEASE CHECK ONE OF THE BOXES BELOW.

I want my pet to have a pre-operative blood panel which tests liver and kidney function, as well as blood count. I understand the cost for this blood panel is \$67.00

*****Required for longer anesthetic procedures, sick patients and pets over the age of 7.**

I decline pre-anesthesia blood work and understand there are **increased risks during surgery.**

Intravenous (IV) Fluid Support during Anesthesia

Administration of IV fluids during anesthesia helps maintain blood pressure and blood flow to vital organs. IV fluid Support greatly increases the safety of anesthesia. The fluids are administered by IV catheter during surgery. **PLEASE CHECK ONE**

Administration of IV fluids during anesthesia (covers fluids and IV catheter) \$50.00

Required for longer anesthetic procedures, sick patients and pets over the age of 7.

I decline the administration of IV fluids during surgery and understand there are **increased risks during surgery.**

Laser surgery

A laser beam cuts the tissue and seals blood vessels and nerve endings resulting in less bleeding, swelling and pain. Less bleeding, swelling and pain often results in a much quicker recovery post-surgery. **PLEASE CHECK ONE**

- I would like laser surgery for my pet \$35.00
- I decline laser surgery and understand there will be a longer recovery time post-surgery.

Cold Laser Therapy

Cold laser therapy is a form of soft tissue therapy. It utilizes low level laser light to stimulate cells into regenerating faster. Each cell has an area that can turn light into energy. Additionally, the light also slightly warms the area. This translates into nutrients entering the cell at a faster rate and waste being removed from the cell.

When cold laser therapy is used on incision sites, it speeds healing and helps reduce pain and swelling. I want my pet to have cold laser therapy on the incision site. I understand the fee is \$35.00.

I do not want my pet to have cold laser therapy on the incision site.

Microchipping

ASPCA statistics on lost pet recovery indicate only 17-30 % of lost dogs are reclaimed by their owners from animal shelters and an appalling 2-5% of cats are reclaimed. Collars and tags are lost while the animal is stray. Microchipping is a way to help recover your pet. A tiny chip, the size of a kernel of rice, is inserted by hypodermic needle. The chip has a unique number which is assigned to your pet when you register the chip. A scanner activates the chip and is used to recover your pet's unique number should he/she become lost. Insertion of the chip is no more painful than a vaccine injection. **PLEASE CHECK ONE**

- I would like a microchip inserted while my pet is under anesthesia \$35.00
- I decline the insertion of a microchip.

Additional Services While under Anesthesia

- Heartworm test
- Fiv/Felv Test
- Distemper/Parvo Vaccine 3 week/1 year
- Lepto Vaccine 3 week/1 year
- Bordetella Vaccine
- Lyme Vaccine
- Extra sedation medication
- Rabies Vaccine 1 year
- Rabies Vaccine 3 year
- Feline Distemper Vaccine 3 week/1 year
- Feline Leukemia Vaccine 3 week/1 year
- Ear tip (feral cats only)

- Pain Meds
- Nail Trim
- Clean/flush ears
- Diphenhydramine inj.
- Droncit injection
- Fecal exam w/Giardia
- Urinalysis
- X-rays
- Ultrasound
- Flea/Tick prevention applied
- Deworm
- Heartworm preventative
